

860 DSPh to Interrogator and WorkBench Ports and Protocols

PC WorkBench – Uses Port 24007 to connect and configure the DSPh. Also uses the TPC Port 80 to do live browser views of the DSPh. Uses TCP Port 23 for telnet communications (can be disabled).

PC Interrogator – Uses TCP Port 24007 to connect to the DSPh. Uses TCP Port 80 to view live data from the DSPh.

DSPh – Uses UDP Port 162 to send traps to the SNMP Management application (Interrogator Server software or 3rd party).

SNMP Management Application – Uses UDP Port 161 for MIB browsing.
