New Product Release: Advanced Communications Test System. (ACTS)

Indianapolis, Indiana (Monday, February 18, 2008), Trilithic, Inc is pleased to announce the availability of the Advanced Communication Test System (ACTS). As the name suggests this new server performs a variety of tests related to cable system advanced communication services, including VoIP and high speed data. The server enables a VoIP RTP test from any field test point with or without Unsolicited Grant Service (UGS), as well as high speed throughput (UDP up to 40 Mbps max). The VoIP test enables efficient service pre-installation verification with a simple, yet comprehensive set of measurement data including upstream and downstream latency, jitter, packet loss and MOS. The throughput test adds an increased level of security, by enabling customizable communication ports, and it doesn't write files to the hard drive. For more information call your Trilithic Representative, or go to www.trilithic.com.

ABOUT TRILITHIC: Trilithic, Inc. is an industry leader providing telecommunications solutions for major Broadband and RF & Microwave markets around the world. Comprised of three major divisions: Broadband Instruments & Systems offers test, analysis and quality management solutions for the major cable television systems around the world. The RF & Microwave Components Division provides various components and custom subsystems for companies specializing in cellular, military and other wireless applications. The E.A.S. Division is a leading supplier of government-mandated Emergency Alert Systems used by HFC service providers in the United States.
